

Constituency Connect

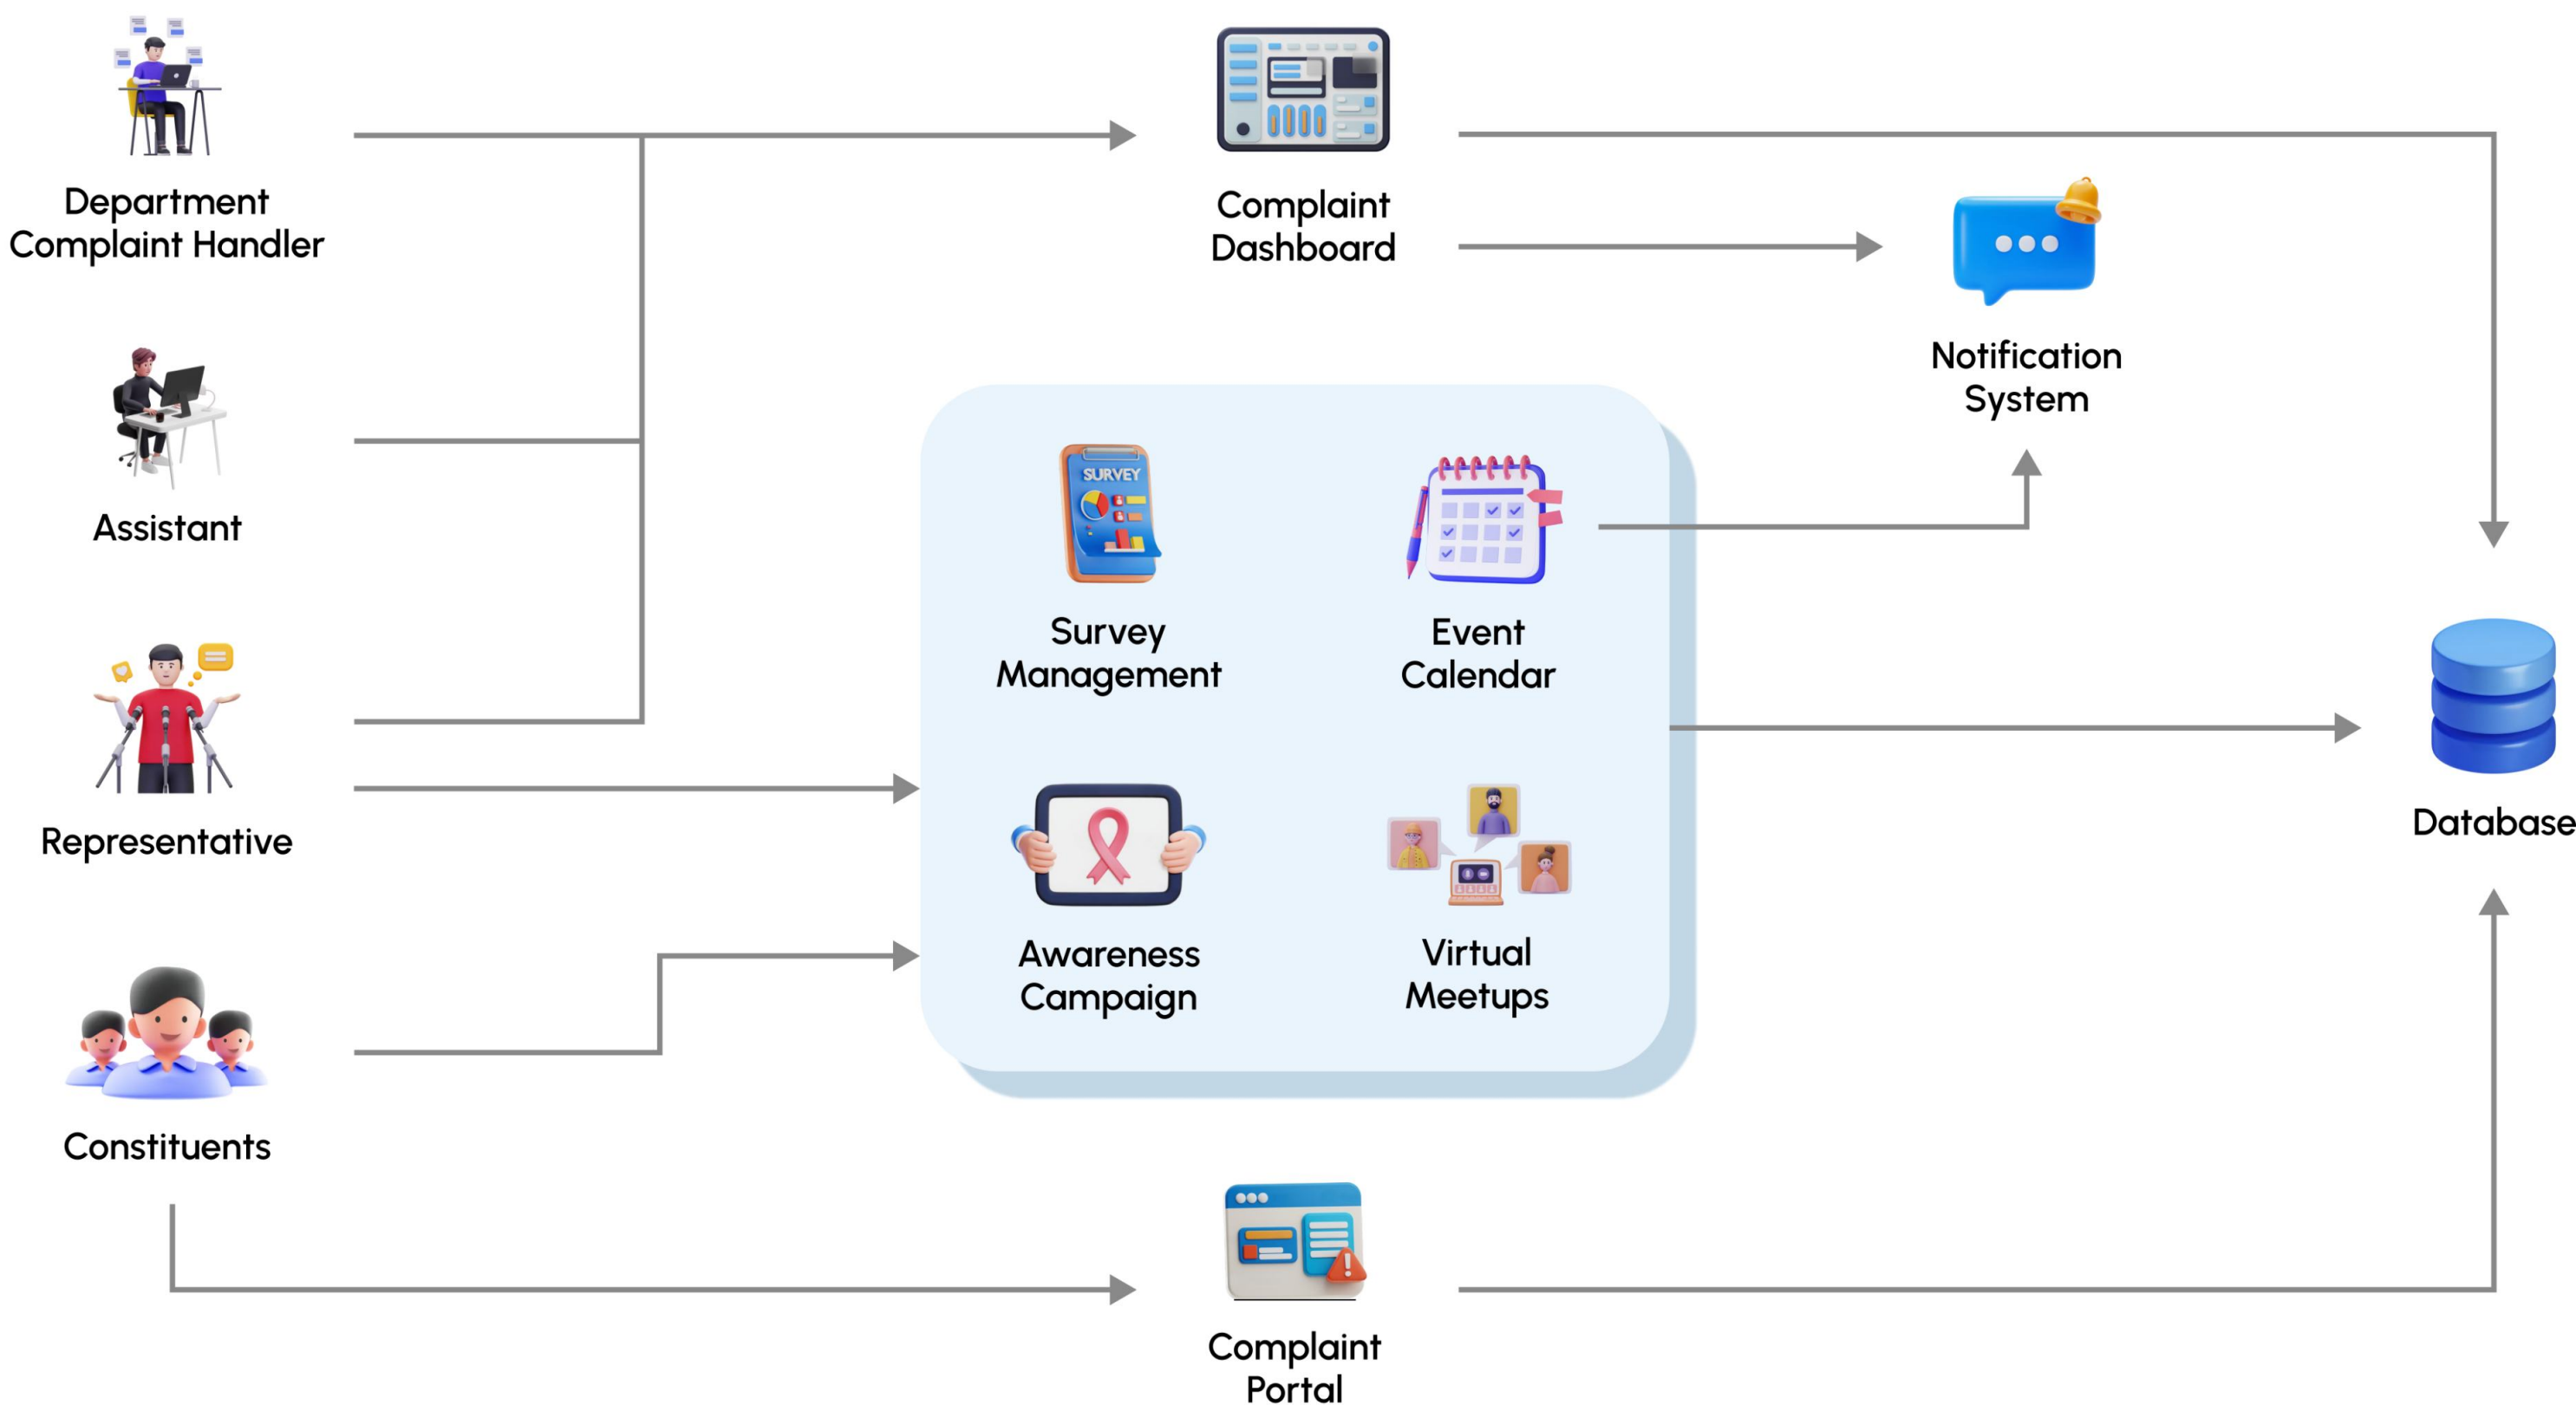

Introduction

Constituency Connect is a web-based application that enhances communication between citizens and their elected representatives. It facilitates efficient reporting and tracking of complaints. The platform offers real-time updates and enables virtual meetups, providing a transparent and engaging channel for citizens to voice concerns, monitor progress, and participate actively in governance

Problem Statement

Although various complaint management systems exist, significant gaps remain in effectively connecting constituents with their representatives. Current communication channels often lack real-time interaction, causing delays in their complaint resolution and weakening civic engagement. This results in reduced accountability, and a growing disconnect between representatives and the public.
